

CAPACITIVELY COUPLED RESISTIVITY

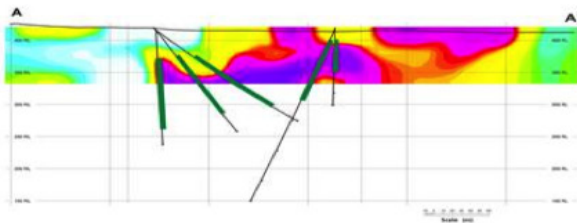

Geometrics ohmmapper system

- Ideally suited for highly resistive ground and frozen terrain – no galvanic contact required!
- Rapid coverage where the system can be towed behind an ATV or snowmobile
- Multiple separation surveys for 2D/3D target delineation
- DGPS track recovery and positioning
- 2D/3D inversion when surveyed with multiple separations

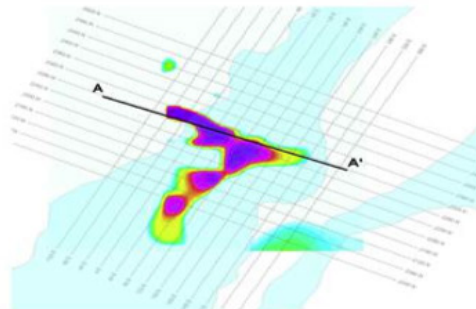

3D resistivity iso-surface produced using inversion modelling results
